JobTrack

Use the power of JobTrack to fuel your business and gain a new edge over the competition

JobTrack Enterprise will quickly pay for itself by improving your internal productivity, providing you with the tools to increase your profits and most importantly, creating a structured environment essential for driving new business and better serving your existing customers.

- Effortlessly track all your labor, material and machine costs in real time
- Measure and Plan your internal production efficiency on a daily basis
- Track you profit target by customer, by order and by press type
- Use E-Commerce to develop a unique relationship with your customers

Adopt CyFrame as your Business Solutions Partner today and start Making better decisions for tomorrow

JobTrack installs on a dedicated internal server and (with the proper security clearance) intranet users can instantly access the system through their browser. This saves time, is more cost effective and easy to maintain, eliminates the need to remedy compatibility issues and software version conflicts; a potential IT nightmare. This gives you the ability to bring up remote plants instantly and access your system from anywhere you have Internet access, i.e. home or for sales reps on the road or at a customer location. The opportunities are limited only to your imagination.

E-commerce is not simply a bolt on "Module" to offer as a buzzword. Our valued Client Area is an integral component of our solution, providing real-time plant data to esteemed clients 24/7, again with limitless possibilities...

Can you afford to wait another year before you try to increase your market share?
